

## BIRMAN [SBI] (Standard Source: FIFe 1987)

### General

- Head:** Strong, rounded, slightly rounded in the muzzle. Head broader than high. Forehead slopes well back, slightly convex in profile, with flatter appearance in front of and between the ears. Roman shape in profile with nostrils set low on the nose leather. Looking from above and behind the nose will not protrude greatly, but should form part of an imaginary semi-oval line from cheek to cheek. Full cheeks help to achieve this. The medium length nose which starts just below the eyes, is Roman in shape (which is slightly convex) with the nostrils set low on the nose leather. Muzzle somewhat rounded. The chin is full and well developed, slightly tapered but not receding. Jaw strong. Neck of medium length, strong, in proportion head and body.
- Ears:** Medium in length, almost as wide at base as they are tall. Tips slightly rounded, set as much to the side as on top of the head.
- Eyes:** Almost round, not bold, and in repose the upper lid should appear to be flatter, less rounded than the lower.
- Body:** Medium weight, longish body.
- Legs and Feet:** Short, strong and well-proportioned legs. Feet round.
- Tail:** Wider at the base, tapering to a rounded tip. Medium in length, fully plumed.
- Coat:** Medium in length, silken in texture. The fur is short in appearance about the face, but to the extreme outer area of the cheek the fur is longer. Full ruff around the neck, slightly curled on stomach. Fur of such texture that it will not mat.  
*For colour and patterns recognised refer to the descriptions below.*
- Remarks:** In general, the head should not resemble that of a Persian, neither should it go to the other extreme of a Siamese-type head.

## COLOURS AND PATTERNS RECOGNISED

### General Description

**Eye Colour:** Seal: Deep Blue, All others: Bright Blue.

**Coat Colour:** Seal, Blue, Chocolate, Lilac, Red, Cream, Caramel and Apricot only.

**Body colour:**

A very pale egg-shell tint: a golden hue on the back may be present in all varieties, and the belly is off-white.

**Point colour:**

Mask, ears, legs and tail are clearly defined (except in kittens). On reaching maturity, the mask covers the entire face, including whisker pads and is connected to the ears by tracings.

**Coat Pattern:** In Solid Pt, Tortie Pt, Tabby Pt, Tortie Tabby Pt, Smoke Pt, Tortie Smoke Pt, Silver Tabby Pt, Silver Tortie Tabby Pt.

*For full details of colours and patterns refer to descriptions below.*

The coat pattern of the Birman resembles that of the Siamese on face, ears, legs and tail (e.g. brown in seal point).

**Gloves:**

The specific characteristics of the Birman are its four white paws (called gloves). They must be absolutely pure white and may stop at the base of the toes or go up as far as the joint between the foot and the leg, but not beyond this point. Some allowance may be made for gloves slightly longer on the back feet. The ideal is for an even distribution on all four feet. On the back feet, the white should taper off to a point under the hock.

The ideal white gauntlet should end between 1/2 and 2/3 of the distance from the paw pad and the joint (hock) of the hind leg; it is desirable that the point of the gauntlet does not reach the end of the joint and it should certainly not extend over this, being seen as the end of the glove on the hind leg. Of paramount importance in the gloves is uniformity and symmetry both between the front legs and the back legs.

**Remarks:**

This standard, as for other breeds, describes the perfect cat. Faultless specimens are exceptional, but faults are more apparent in the Birman due to the white markings where any defect is obvious at first sight. Cats having the greatest balance and regularity in the gloves should be selected but other general qualities should not be disregarded. It is the overall harmony which constitutes the beauty of the Birman and it is from this point of view that it should be judged. White patches in the coloured parts (points) are a disqualifying fault and cats with this defect should not be used for breeding. The same applies to dark spots in the white gloves.

**Nose leather & Paw pads:** As for the equivalent caramel or caramel tabby point colour, may be mottled with bright pink.

### **SILVER TABBY POINT BIRMAN**

In all Silver Tabby Point Birmans, point colour is the equivalent of a standard coloured tabby point with the addition of the inhibitor (silver) gene that removes the colour from the roots of the hairs. Thus, the roots should be silver white with the agouti ground areas showing contrasting bands of colour and silver white. The degree of silvering varies some cats resemble tabby points while others show extreme contrast with the ground colour. The mask must be clearly tabby marked, especially around the eyes and nose; the cheeks have stripes and the whisker pads are spotted. The ears are without stripes but have a thumbmark (as in all tabbies). The tail is evenly ringed and ends in a solid tip.

There are bars of varying length on the legs; the soles of the hind legs (where not white) are solid colour. Nose leather colour may not be solid. Colour variations allowable.

- The ear furnishings in all silver cats are preferably silver white (exception: Siamese smoke points).
- The thumbprints on the ears of silver tabby cats (pointed or not) are distinctly pale, varying from off white to clear silver, as are the ear rims.

**Point Colour:**

**All:** Metallic sheen clearly seen on scarab, some-times on leg bracelets and tail rings in more mature kittens and cats. There is a brownish tone to fur between toes and surrounding the paw pads. The characteristic metallic sheen is seen on the hocks, developing with maturity. The effect of Dm (Dilute modifier) is to give a warm, brownish cast to lilac and blue. Underside of the tail will be devoid of tabby barring and is silver-white with very little evidence of point colour. Background facial colour is silver-white as are the thumbprints. **Nose Leather:** Pink outlined in deep pink.

**Paw Pads:** Pink.

**Remarks:** The metallic sheen may be less evident in kittens. "Freckles" may occur on nose, pads, lips, eyelids and ears and slight freckling even in a mature cat should not be penalised.

### **SILVER TORTIE TABBY POINT**

In all Silver Tortie Tabby Point Birman, point colour is the equivalent of a standard coloured tortie tabby point with the addition of the inhibitor (silver) gene that removes the

colour from the roots of the hairs, thus the pattern is not solid to roots. Colours may be patched or mingled at random with the relevant tortie colours overlaid with the relevant tabby point colour. Blazes, solid legs, ears or tails are all permissible. Presence or absence of a blaze is immaterial. Points may display two or more shades of the basic colours with tabby barring. The distribution and degree of tortie colouring is the same as for tortie point. The underside of the tail will be paler.

The degree of silvering varies; some cats resemble tortie tabby points while others show extreme contrast with the ground colour. The ideal is the silver with the extreme contrast.

### **SEAL SILVER TORTIE TABBY POINT** (*SBI fs 21*)

**Nose Leather & Paw Pads:** Lavender-pink or pink, plain or blotched.

### **CARAMEL SILVER TORTIE TABBY POINT**

(*SBI gms 21, blue based / SBI jms 21, lilac based*)

**Body Colour:** Off white (magnolia). Tabby shading and tortie patching, if any, to tone with the points. Shading, if any, to tone with the points, but it on the surface of the coat only. Coat texture may be extra silky due to the silver.

**Point Colour:**

**All:** Metallic sheen clearly seen on tabby markings in more mature kittens and cats. There is a brownish tone to fur between toes and surrounding the paw pads. The characteristic metallic sheen is seen on the hocks, developing with maturity. The effect of Dm (Dilute modifier) is to give a warm, brownish cast to lilac and blue. Underside of the tail will usually be devoid of tabby barring and is usually silver-white with very little evidence of point colour.

Background facial colour is silver-white as are the thumbprints. Leg pattern and barring is not so obvious because colour is diffused by the effect of silver.

**Blue Based:** dark but warm toned brownish blue grey patched and/or intermingled with shades of apricot.

**Lilac Based:** warm, light tan, dove grey patched and/or intermingled at random with shades of apricot.

**Nose Leather & Paw Pads:** As for the equivalent caramel or caramel tabby point colour, may be mottled with bright pink.

### **SMOKE POINT BIRMAN**

The undercoat in the points of all smoke points is lighter than the surface colour. There are paler areas around the eyes and ear furnishings will normally be of this lighter, contrasting tone. Ghost tabby marking and scattered white hairs are permissible in an otherwise good kitten. The smoke effect is produced by a silvery undercoat, usually most noticeable on the underside of the tail, which is often devoid of other colour. There is a great degree of variation in the degree of contrast between roots and surface (point) colour. The reduction in pigment overall allows the hidden tabby patterns present in all cats to show though in a ghost tabby pattern in the smoke point especially in the brow.

Note: In smoke points, body shading is on the surface of the coat only. Coat texture may be extra silky due to the inhibitor gene (silver).

- a) The ear furnishings in all silver cats are preferably silver white (exception: Siamese smoke points).
- b) The thumbprints on the ears of silver tabby cats (pointed or not) are distinctly pale, varying from off white to clear silver, as are the ear rims.
